The Daito Trust Construction Obtained the SBT Initiative Certification

**Contributing to the realization of a decarbonized society
through spreading ZEH multifamily rental apartment**

In January 22, 2019, Daito Trust Construction Co., Ltd., obtained the SBT*¹ (Science Based Targets) Initiative Certification that the Daito Group's greenhouse gas (GHG) reduction targets are scientifically grounded to achieve the "2 target" aimed at by the Paris Agreement. The Daito Group has also joined the RE100*² (Renewable Energy 100) in order to commit the business activities sourced by 100% renewable electricity. The Daito Group will work to realize a decarbonized society through the spreading ZEH*³ (Net-Zero Energy House) multifamily rental apartment.

■ Acquired SBT Initiative Certification and accelerate toward decarbonized business management

<Purpose of SBT certification acquisition>

The Daito Group is promoting environmental management and is working to reduce GHG emissions in business activities by the entire group. By achieving the target of GHG emission reduction certified by SBT initiative, we will further promote environmental management and contribute to the realization of a decarbonized society

<Our target>

**Daito Trust Construction commits to reduce absolute scope 1, 2 and 3
GHG emissions 16% by FY 2030 from a FY 2017 base year.**

■ To achieve our target

● Spreading ZEH multifamily rental apartment

Daito Trust Construction has been registered as a "ZEH developer" to supply ZEH multifamily rental apartment. Through development and introduction of environmentally considerate building materials and energy solutions, we are actively working to promote the spreading of ZEH multifamily rental apartment with less environmental impact

● Promotion of energy saving and use of renewable energy

We are working on energy saving efforts to reduce energy consumption in our business activities and promoting to reduce CO₂ emissions through energy use.

*3 ZEH (Net-Zero Energy House):

A ZEH is a house with an annual net energy consumption around zero (or less) by saving as much energy as possible while maintaining comfortable living environment. This can be achieved through better heat insulation, high-efficiency equipment, and creating energy with photovoltaic power generation
